Keep your machine running
with

RE-MAN COMPONENTS

Tata Hitachi Construction Machinery Company Private Limited

TATA HITACHI RE-MAN COMPONENTS

No matter the location, conditions or type of project, Tata Hitachi construction and mining excavators deliver efficiency, reliability and durability for customers day after day. But even these tough workhorses are subject to wear. While component wear is unavoidable with any machine, Tata Hitachi Re-man offers an affordable, premium solution to keep machines up and running.

COST-EFFECTIVE EFFICIENCY, RELIABILITY AND DURABILITY

At Tata Hitachi Re-man, we offer a selection of options that provide added value to customer operations at a price point of 40~60 percent the cost of the equipment new component. Pair that low cost with a service life that is the same as the original, and you get a Tata Hitachi solution that minimises owning and operating costs and maximises fleet productivity. And, these components are backed by a comprehensive Tata Hitachi Re-man warranty to ensure customer confidence on any job.

OUR RE-MAN PROCESS

To make sure that our Re-man components live up to customer expectations, we leave nothing to chance. Each component is completely disassembled to allow a thorough inspection of the individual parts.

Each part must meet OEM specifications or it is not reused. Wear parts like bearings, bushings, seals, and gaskets are never reused. Parts which are scrapped during the remanufacturing process are replaced with quality parts as were originally used in the component.

We also incorporate all product updates into the Re-man components to maximise performance and durability. After assembly, each component is thoroughly tested to OEM specifications. Once the component has passed testing, it is painted, packaged and stocked within the Tata Hitachi parts distribution system so it is ready and waiting when needed.

OUR REMANUFACTURED PRODUCTS INCLUDE:

MACHINE CLASS	MAIN PUMP	SWING PUMP	SWING MOTOR	TRAVEL MOTOR	FAN PUMP	FAN MOTOR	ENGINE
 Construction Zaxis Class (12-37 MT)	✓	NA	✓	✓	NA	NA	✓
